

Transport Layer Security

Check the server security of the website: beuth-hochschule.de / 141.64.5.76

Hint: for example you can use: <https://www.ssllabs.com/index.html>

The screenshot shows the top portion of a Qualys SSL Labs report. At the top left is the Qualys logo, a red shield with a white 'Q'. To its right is the text 'Qualys. SSL Labs'. Below this is a breadcrumb trail: 'You are here: [Home](#) > [Projects](#) > [SSL Server Test](#) > beuth-hochschule.de'. The main heading of the report is 'SSL Report: beuth-hochschule.de (141.64.5.76)'. Below the heading, the text 'Approved on: Fri, 18 Oct 2019 10:00:40 UTC' is visible, followed by a partially obscured URL.

What is the result/ grade? Why is it good?
